HOG PRODUCTION—II

PROVIDE PASTURE AND SELF-FEEDERS FOR SOWS AND PIGS

Sows and pigs should have access to good pasture, supplemental grain and tankage or fish meal in self-feeders during suckling period.

GUARD AGAINST INFECTIOUS DISEASES

Immunization by the serum-virus method gives protection against hog cholera.

USE HOME-GROWN FEEDS

Hogging down corn supplemented with a protein, such as tankage in a self-feeder or legume pasture, is a profitable method of fattening.

PROTECT AGAINST PARASITES

Roundworms can largely be avoided by keeping pigs out of the old hog yards where worm eggs are in the soil.

PASTURE THE GROWING PIGS

No class of hogs needs pasture more than growing pigs. Legumes such as alfalfa and clover are the best.

MARKET AT PROPER WEIGHT

The market wants hogs that are well finished. It usually prefers weights of 160 to 225 pounds.

Prepared by Extension Service, in cooperation with the Bureau of Animal Industry,
United States Department of Agriculture, Washington, D. C.

Group No. 1.—Livestock—Cattle and Hogs (Chart No. 1.7). Group of seven charts. Price 25 cents. Issued 1939.
